抓取北京新发地菜价

```python
from concurrent.futures import ThreadPoolExecutor
import csv
import requests
from lxml import etree

# 干掉新发地
def download(url):
    resp = requests.get(url)
    html = etree.HTML(resp.text)
    table = html.xpath("/html/body/div[2]/div[4]/div[1]/table")[0]
    trs = table.xpath("./tr[position()>1]")
    for tr in trs:
        tr_text = tr.xpath("./td/child::text()")
        tr_text = (item.replace("\\", "").replace("/", "") for item in tr_text)
```

```python
16              csv_writer.writerow(tr_text)
17      return url
18
19
20  if __name__ == '__main__':
21      csv_writer = csv.writer(open("菜价.csv",
    mode="w"))
22      with ThreadPoolExecutor(50) as t:
23          for i in range(1, 100):  # 别弄太狠．不好
24              url_temp =
    f"http://www.xinfadi.com.cn/marketanalysis/0/list
    /{i}.shtml"
25              t.submit(fn=download, url=url_temp)
26      print("all down!")
```
